

Practical case: Simple voltage divider

Master Analog Electronics by building a voltage divider with a Resistor pair. Learn to step down 9V to 4.5V for sensor interfacing and verify the output ratio.

Practical case: Current limiting in an LED

Current limiting in an LED

Master Analog Electronics basics by building a circuit where a Resistor protects an LED. Apply Ohm's Law to limit current and ensure safe, steady illumination.

Practical case: Emergency deactivation

Emergency deactivation

Learn Digital Electronics by building a safety kill switch using a NOT gate. Create a circuit where pressing a button instantly cuts the Ready signal voltage.

Practical case: Automatic darkness sensor

Automatic darkness sensor

Master Digital Electronics by building an automatic night light. Use a NOT gate and LDR to detect darkness and trigger an LED, learning practical sensor logic.

Practical case: Open door alarm

Open door alarm

Master Digital Electronics by building a security circuit with a NOT gate. Learn to trigger an LED warning signal instantly when a switch contact opens.

Practical case: Signal inverter with indicator LED

Signal inverter with indicator LED

Master Digital Electronics by building a safety interlock circuit with a NOT gate. Learn to invert logic signals and control LED indicators for real-world...
